

EZAccess Access Control and Attendance Management Software

Overview

EZAccess is a client application program developed specifically for attendance management. Based on face recognition access control, EZAccess can manage multiple face recognition access control devices and provide functions including device management, department management, personnel management, visit control, and attendance management. EZAccess is easy to deploy and use, can significantly reduce labor cost, and is suitable for small and medium sized access control and attendance management applications such as factories, enterprises, stores and supermarkets.

Features

- Efficient device management: unified management of multiple Uniview access control devices.
- Efficient device configuration: add devices on LAN by IP address, add persons in batches, and configure permissions by clicking a button.
- Rich attendance functionality:
 - Set attendance rules, including daily attendance time, rules for late arrivals and early departures.

- Manage schedules by time period and shifts
- Handle abnormal attendance, including resign-in and resign-out, leaves and business travels
- Attendance statistics, including original attendance data, attendance summary and details.

Specifications

Function	Description
Note: Functionality may vary with software version.
